

# QHTTP send post request

## From QT Wikipedia

Simple example shows you how to send post parameters to web service

```
QHttpRequestHeader header("POST", "/posthandler.php");
header.setValue("Host", <domain>);

QHttpClient->setHost(domain);
header.setValue("User-Agent", "User Agent");
header.setContentType("application/x-www-form-urlencoded");
QString searchString = "postparam=value";
QHttpClient->request(header, searchString.toUtf8());
```
