SMTP Client for Qt (C++)

- [Page History](#)

SMTP Client for Qt (C++)

The SmtpClient for Qt is small library written for Qt 4 (C++ version) that allows application to send complex emails (plain text, html, attachments, inline files, etc.) using the Simple Mail Transfer Protocol (SMTP).

SMTP Client for Qt supports

- TCP and SSL connections to SMTP servers
- SMTP authentication (PLAIN and LOGIN methods)
- sending MIME emails (to multiple recipients)
- plain text and HTML (with inline files) content in emails
- multiple attachments and inline files (used in HTML)

- different character sets (ascii, utf-8, etc) and encoding methods (7bit, 8bit, base64)
- error handling

Examples:

- [Example 1 - A simple \(text only\) email](#)
- [Example 2 - Sending attachments](#)
- [Example 3 - HTML email with embedded images \(inline files\)](#)

Markdown Cheat Sheet

Format Text

Headers

```
# This is an <h1> tag
## This is an <h2> tag
##### This is an <h6> tag
```

Text styles

```
*This text will be italic*
_This will also be italic_
**This text will be bold**
__This will also be bold__

*You **can** combine them*
```

Lists

Unordered

```
* Item 1
* Item 2
  * Item 2a
  * Item 2b
```

Ordered

```
1. Item 1
2. Item 2
3. Item 3
  * Item 3a
  * Item 3b
```

Miscellaneous

Images

```
![GitHub Logo] (/images/logo.png)
Format: ![Alt Text] (url)
```

Links

```
http://github.com - automatic!
[GitHub] (http://github.com)
```

Blockquotes

As Kanye West said:

```
> We're living the future so  
> the present is our past.
```

Code Examples in Markdown

Syntax highlighting with [GFM](#)

```
```javascript  
function fancyAlert(arg) {
 if(arg) {
 $.facebox({div:'#foo'})
 }
}
```
```

Or, indent your code 4 spaces

Here is a Python code example
without syntax highlighting:

```
def foo:  
    if not bar:  
        return true
```

Inline code for comments

I think you should use an
`<addr>` element here instead.

Something went wrong with that request. Please try again.
